Bellwethr
2018 - Present

Full Stack Engineer

Startup that offers automated machine learning platforms for business. Developed a machine learning redirect system called URLs.AI that automatically redirects the user to the link with highest chance of conversion. Also developed a machine learning powered customer retention system that smartly provided customers with options when ending a service or unsubscribing.

HitchPin
2017 - 2019

Lead Full Stack Engineer

Lead full stack developer for startup that aimed to be an ecommerce site for ag related products. Developed a react.js with redux web app supported by a Django backend hosted on AWS. Oversaw development sprints, project planning, dev-ops, and marketing campaigns.

Collegian Media
2017 - 2018

Full Stack Engineer

Created, developed, and maintained wordpress websites with LAMP stack backends on Windows Server 2016. Also aided in marketing campaigns, created custom html/css emails and distributed them to the entire student body.

JEA
2017 - 2018

Software Development

Took existing wordpress site that had not been updated in 10+ years, and redesigned the existing site and architecture while reverse engineering the database for better performance.

Queen Bee Marketing
Summer 2018

Software Development

Developed a web app using bootstrap and PHP to allow users to sign up and reserve rooms in a co-op space, also allowed online payments using Stripe api.
